

# Pro Audio Asia

May - June 2009, Page 52

## Sonifex gets a new Reference

**THE LATEST** version of Sonifex's **Reference Monitor** has made its debut. The new version can decode a Dolby E or Dolby Digital

audio stream allowing the user to monitor visually eight or 5.1 audio channels respectively and to monitor audibly any two channels.

There are three Reference Monitor products. Available as either rack-mount units, or as add-on cards to existing RM-4C8 units, the cards can either decode Dolby 5.1 audio from an AES audio stream (with

options for either XLR or BNC connections), or de-embed an AES stream from an HD/SD-SDI source and then decode a Dolby encoded AES signal.

Other new products shown by the

manufacturer at CABSAT included two confidence monitors, the RM-CA2, and the RM-CAD8.
