Broadcast mixer Sonifex

S1: The Sonifex S1 mixer is a high performance compact, low-cost, fixed format mixing console designed for on-air radio use. It can be fitted flush into a desktop or rack mounted by the addition of rack ears. It has 10 dual input channels consisting of four mono mic/line inputs, one telco/line input, one stereo cleanfeed/stereo line input, three dual stereo line inputs and one dual digital stereo input channel. There is also a 3.5mm insert jack socket for an Ipod/MP3 player auxiliary connection. The S1 has one stereo program output available as both balanced analog and AES/EBU or S/PDIF digital, so that a main program feed can be sent to a transmitter while a digital feed can go directly to a PC for internet streaming.
